

collect

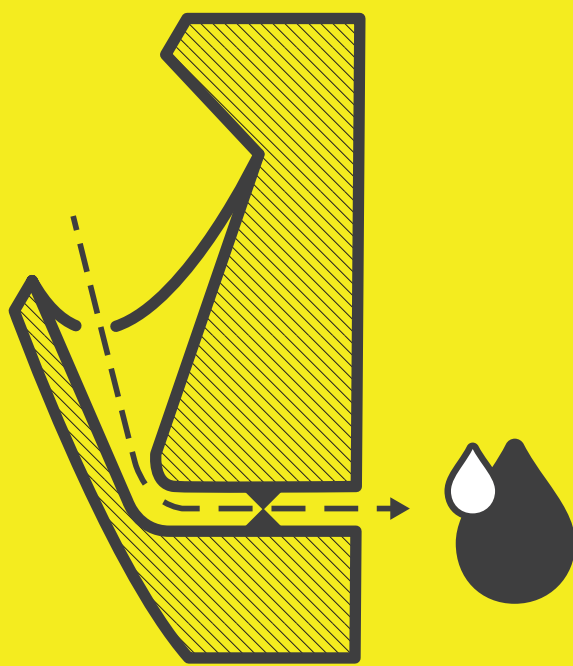

How do we collect

In the donor rooms you can donate your **P**ee, either in a no-Mix toilet or a waterless urinal.

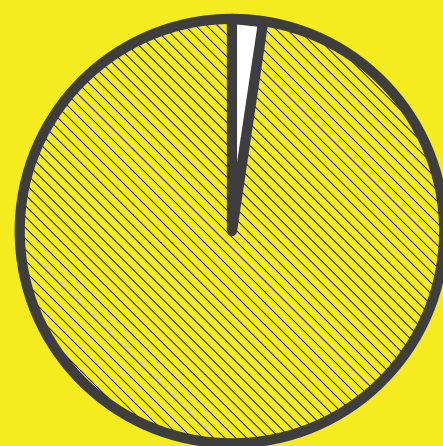

No-mix toilet

This toilet save! by Laufen separate Pee directly. Pee is directing towards a concealed second outlet using only surface tension.

Waterless Urinal

The urinal is not flushed with water to keep the P pure. A simple membrane seal prevents odours.

Why seperate Pee?

Only 1% of domestic wastewaters is urine. But more than 50% of the P found in wastewaters comes from urine. For other nutrients like, Nitrogen (N) or Potassium (K) these percentages are even higher.
